

ASP.NET Course Content

Overview of the ASPNET Framework

- ❖ ASPNET and the NET Framework
- ❖ Understanding the Framework Class Library
- ❖ Understanding the Common Language Runtime
- ❖ Understanding ASPNET Controls
- ❖ Overview of ASPNET Controls
- ❖ Understanding HTML Controls
- ❖ Understanding and Handling Control Events
- ❖ Understanding View State
- ❖ Understanding ASPNET Pages
- ❖ Understanding Dynamic Compilation
- ❖ Understanding Control Trees
- ❖ Using Code-Behind Pages
- ❖ Handling Page Events
- ❖ Using the PagePostBack Property
- ❖ Debugging and Tracing ASPNET Pages
- ❖ Tracing Page Execution

Installing the ASPNET Framework

Using the Standard Controls

- ❖ Displaying Information
- ❖ Using the Label Control
- ❖ Using the Literal Control
- ❖ Accepting User Input
- ❖ Using the TextBox Control
- ❖ Using the CheckBox Control
- ❖ Using the RadioButton Control
- ❖ Submitting Form Data
- ❖ Using the Button Control
- ❖ Using the LinkButton Control
- ❖ Using the ImageButton Control
- ❖ Using Client Scripts with Button Controls
- ❖ Performing Cross-Page Posts
- ❖ Specifying a Default Button
- ❖ Handling the Command Event
- ❖ Displaying Images
- ❖ Using the Image Control
- ❖ Using the ImageMap Control
- ❖ Using the Panel Control
- ❖ Using the HyperLink Control

Using the Validation Controls

- ❖ Overview of the Validation Controls
- ❖ Validation Controls and JavaScript
- ❖ Using PageIsValid
- ❖ Setting the Display Property
- ❖ Highlighting Validation Errors
- ❖ Using Validation Groups
- ❖ Disabling Validation
- ❖ Using the RequiredFieldValidator Control
- ❖ Using the RangeValidator Control
- ❖ Using the CompareValidator Control
- ❖ Using the RegularExpressionValidator Control
- ❖ Using the CustomValidator Control
- ❖ Using the Validation Control
- ❖ Creating Custom Validation Controls
- ❖ Creating a LengthValidator Control
- ❖ Creating an AjaxValidator Control

Using the Rich Controls

- ❖ Accepting File Uploads
- ❖ Saving Files to the File System
- ❖ Saving Files to a Database
- ❖ Uploading Large Files
- ❖ Displaying a Calendar
- ❖ Creating a Pop-up Date Picker
- ❖ Rendering a Calendar from a Database Table
- ❖ Displaying Advertisements
- ❖ Storing Advertisements in an XML File
- ❖ Storing Advertisements in a Database Table
- ❖ Tracking Impressions and Transfers
- ❖ Displaying Different Page Views
- ❖ Displaying a Tabbed Page View
- ❖ Displaying a Multi-Part Form
- ❖ Displaying a Wizard

Designing Websites with Master Pages

- ❖ Creating Master Pages
- ❖ Creating Default Content
- ❖ Nesting Master Pages
- ❖ Using Images and Hyperlinks in Master Pages
- ❖ Registering Master Pages in Web Configuration
- ❖ Modifying Master Page Content
- ❖ Using the Title Attribute
- ❖ Using the Page Header Property
- ❖ Exposing Master Page Properties
- ❖ Using FindControl with Master Pages
- ❖ Loading Master Pages Dynamically
- ❖ Loading Master Pages Dynamically for Multiple Content Pages

Designing Websites with Themes

- ❖ Creating Themes
- ❖ Adding Skins to Themes
- ❖ Creating Named Skins
- ❖ Themes VersusStyleSheetThemes
- ❖ Disabling Themes
- ❖ Registering Themes in the Web Configuration File
- ❖ Adding Cascading Style Sheets to Themes
- ❖ Adding Multiple Cascading Style Sheets to a Theme
- ❖ Changing Page Layouts with Cascading Style Sheets
- ❖ Creating Global Themes
- ❖ Applying Themes Dynamically
- ❖ Applying Skins Dynamically

Using List Controls

- ❖ Overview of the List Controls
- ❖ Declaring List Items
- ❖ Binding to a Data Source
- ❖ Determining the Selected List Item
- ❖ Appending Data Items
- ❖ Enabling Automatic PostBacks
- ❖ Using the Items Collection
- ❖ Working with the DropDownList Control
- ❖ Working with the RadioButtonList Control
- ❖ Working with the ListBox Control
- ❖ Working with the CheckBoxList Control
- ❖ Working with the BulletedList Control
- ❖ Creating a Custom List Control

Using the GridView Control

- ❖ GridView Control Fundamentals
- ❖ Displaying Data
- ❖ Selecting Data
- ❖ Using Data Keys
- ❖ Sorting Data
- ❖ Paging Through Data
- ❖ Editing Data
- ❖ Displaying Empty Data
- ❖ Formatting the GridView Control
- ❖ Using ViewState with the GridView Control
- ❖ Using Fields with the GridView Control
- ❖ Using BoundFields
- ❖ Using CheckBoxFields
- ❖ Using CommandFields
- ❖ Using ButtonFields
- ❖ Using HyperLinkFields
- ❖ Using ImageFields
- ❖ Using TemplateFields

Using the DetailsView and FormView Controls

- ❖ Using the DetailsView Control
- ❖ Displaying Data with the DetailsView Control
- ❖ Using Fields with the DetailsView Control
- ❖ Displaying Empty Data with the DetailsView Control
- ❖ Paging Through Data with the DetailsView Control
- ❖ Updating Data with the DetailsView Control
- ❖ Inserting Data with the DetailsView Control
- ❖ Deleting Data with the DetailsView Control
- ❖ Working with DetailsView Control Events
- ❖ Formatting the DetailsView Control
- ❖ Using the FormView Control
- ❖ Displaying Data with the FormView Control
- ❖ Paging Through Data with the FormView Control
- ❖ Editing Data with the FormView Control
- ❖ Inserting Data with the FormView Control
- ❖ Deleting Data with the FormView Control

Using the Repeater and DataList Controls

- ❖ Using the Repeater Control
- ❖ Displaying Data with the Repeater Control
- ❖ Using Templates with the Repeater Control
- ❖ Handling Repeater Control Events
- ❖ Using the DataList Control
- ❖ Displaying Data with the DataList Control
- ❖ Displaying Data in Multiple Columns
- ❖ Using Templates with the DataList Control
- ❖ Selecting Data with the DataList Control
- ❖ Editing Data with the DataList Control
- ❖ Formatting the DataList Control

Creating Custom Controls with User Controls

- ❖ Creating User Controls
- ❖ Registering User Controls in the Web Configuration File
- ❖ Exposing Properties from a User Control
- ❖ Exposing Events from a User Control
- ❖ Creating an AddressForm Control
- ❖ AJAX and User Controls
- ❖ Dynamically Loading User Controls
- ❖ Using the Reference Directive
- ❖ Creating a Multi-Page Wizard

Using the ListView and DataPager Controls

- ❖ Using the ListView Control
- ❖ Using the LayoutTemplate and ItemTemplate
- ❖ Using the GroupTemplate
- ❖ Selecting a Row
- ❖ Sorting Database Data
- ❖ Editing Database Data
- ❖ Using the DataPager Control
- ❖ Creating a Custom User Interface for Paging
- ❖ Data Source Paging with the DataPager Control

Using the ListView and DataPager Controls

- ❖ Using the ListView Control
- ❖ Using the LayoutTemplate and ItemTemplate
- ❖ Using the GroupTemplate
- ❖ Selecting a Row
- ❖ Sorting Database Data
- ❖ Editing Database Data
- ❖ Using the DataPager Control
- ❖ Creating a Custom User Interface for Paging
- ❖ Data Source Paging with the DataPager Control

Building Components

- ❖ Building Basic Components
- ❖ Components and Dynamic Compilation
- ❖ Mixing Different Language Components in the App_Code Folder
- ❖ Declaring Methods
- ❖ Declaring Fields and Properties
- ❖ Declaring Constructors
- ❖ Overloading Methods and Constructors
- ❖ Declaring Namespaces
- ❖ Creating Partial Classes
- ❖ Inheritance and Abstract Classes
- ❖ Declaring Interfaces
- ❖ Using Access Modifiers
- ❖ Intellisense and Components
- ❖ Using ASPNET Intrinsic in a Component
- ❖ Building Component Libraries
- ❖ Compiling Component Libraries
- ❖ Adding a Reference to a Class Library
- ❖ Architectural Considerations
- ❖ Building Multi-Tier Applications
- ❖ Creating the User Interface Layer
- ❖ Creating the Business Logic Layer
- ❖ Creating the Data Access Layer

Building Data Access Components with ADONET

- ❖ Connected Data Access
- ❖ Using the Connection Object
- ❖ Using the Command Object
- ❖ Using the DataReader Object
- ❖ Disconnected Data Access
- ❖ Using the DataAdapter Object
- ❖ Using the DataTable and DataView Object
- ❖ Using the DataSet Object
- ❖ Executing Asynchronous Database Commands
- ❖ Using Asynchronous ADONET Methods
- ❖ Using Asynchronous ASPNET Pages
- ❖ Building Database Objects with the NET Framework
- ❖ Enabling CLR Integration
- ❖ Creating User-Defined Types with the NET Framework
- ❖ Building a Data Access Layer with a User-Defined Type
- ❖ Creating Stored Procedures with the NET Framework
- ❖ Creating the Stored Procedure Assembly

Using the Login Controls

- ❖ Overview of the Login Controls
- ❖ Using the Login Control
- ❖ Automatically Redirecting a User to the Referring Page
- ❖ Automatically Hiding the Login Control from Authenticated Users
- ❖ Using a Template with the Login Control
- ❖ Performing Custom Authentication with the Login Control
- ❖ Using the CreateUserWizard Control
- ❖ Configuring Create User Form Fields
- ❖ Sending a Create User Email Message
- ❖ Automatically Redirecting a User to the Referring Page
- ❖ Automatically Generating a Password
- ❖ Using Templates with the CreateUserWizard Control
- ❖ Adding Steps to the CreateUserWizard Control
- ❖ Using the LoginStatus Control
- ❖ Using the LoginName Control
- ❖ Using the ChangePassword Control
- ❖ Sending a Change Password Email
- ❖ Using Templates with the ChangePassword Control
- ❖ Using the PasswordRecovery Control
- ❖ Sending the Original Password
- ❖ Requiring a Security Question and Answer
- ❖ Using Templates with the PasswordRecovery Control
- ❖ Using the LoginView Control
- ❖ Using Roles with the LoginView Control

Maintaining Application State

- ❖ Using Browser Cookies
- ❖ Cookie Security Restrictions
- ❖ Creating Cookies
- ❖ Reading Cookies
- ❖ Setting Cookie Properties
- ❖ Deleting Cookies
- ❖ Working with Multivalued Cookies
- ❖ Using Session State
- ❖ Storing Database Data in Session State
- ❖ Using the Session Object
- ❖ Handling Session Events
- ❖ Controlling When a Session Times Out
- ❖ Using Cookieless Session State
- ❖ Configuring a Session State Store
- ❖ Configuring SQL Server Session State
- ❖ Using Profiles
- ❖ Creating Profile Groups
- ❖ Supporting Anonymous Users
- ❖ Migrating Anonymous Profiles
- ❖ Inheriting a Profile from a Custom Class
- ❖ Creating Complex Profile Properties
- ❖ Saving Profiles Automatically
- ❖ Accessing Profiles from Components
- ❖ Using the Profile Manager
- ❖ Configuring the Profile Provider
- ❖ Creating a Custom Profile Provider

Working with the HTTP Runtime

- ❖ Creating a Custom BuildProvider
- ❖ Creating a Simple BuildProvider
- ❖ Creating a Data Access Component BuildProvider
- ❖ Creating a Custom ExpressionBuilder
- ❖ Creating a Lookup ExpressionBuilder
- ❖ Creating HTTP Handlers
- ❖ Creating a Generic Handler
- ❖ Implementing the IHttpHandler Interface
- ❖ Registering Extensions with Internet Information Server
- ❖ Creating an Asynchronous HTTP Handler
- ❖ Working with HTTP Applications and HTTP Modules
- ❖ Creating a Globalasax File
- ❖ Creating Custom HTTP Modules

Caching Application Pages and Data

- ❖ Overview of Caching
- ❖ Using Page Output Caching
- ❖ Varying the Output Cache by Parameter
- ❖ Varying the Output Cache by Control
- ❖ Varying the Output Cache by Header
- ❖ Varying the Output Cache by Browser
- ❖ Varying the Output Cache by a Custom Function
- ❖ Specifying the Cache Location
- ❖ Creating a Page Output Cache File Dependency
- ❖ Expiring the Page Output Cache Programmatically
- ❖ Manipulating the Page Output Cache Programmatically
- ❖ Creating Page Output Cache Profiles
- ❖ Using Partial Page Caching
- ❖ Using Post-Cache Substitution
- ❖ Caching with a User Control
- ❖ Sharing a User Control Output Cache
- ❖ Manipulating a User Control Cache Programmatically
- ❖ Creating a User Control Cache File Dependency
- ❖ Caching Dynamically Loaded User Controls
- ❖ Using DataSource Caching
- ❖ Using an Absolute Cache Expiration Policy
- ❖ Using a Sliding Cache Expiration Policy
- ❖ Caching with the ObjectDataSource Control
- ❖ Caching with the XmlDataSource Control
- ❖ Creating a DataSource Control Key Dependency
- ❖ Using Data Caching
- ❖ Using the Cache Application Programming Interface
- ❖ Adding Items to the Cache
- ❖ Adding Items with an Absolute Expiration Policy
- ❖ Adding Items with a Sliding Expiration Policy
- ❖ Adding Items with Dependencies
- ❖ Specifying Cache Item Priorities
- ❖ Configuring the Cache
- ❖ Using SQL Cache Dependencies
- ❖ Using Polling SQL Cache Dependencies
- ❖ Configuring Polling SQL Cache Dependencies
- ❖ Using Polling SQL Cache Dependencies with Page Output Caching
- ❖ Using Polling SQL Cache Dependencies with DataSource Caching
- ❖ Using Polling SQL Cache Dependencies with Data Caching
- ❖ Using Push SQL Cache Dependencies
- ❖ Configuring Push SQL Cache Dependencies
- ❖ Using Push SQL Cache Dependencies with Page Output Caching
- ❖ Using Push SQL Cache Dependencies with Data Source Caching
- ❖ Using Push SQL Cache Dependencies with Data Caching

Localizing Applications for Multiple Languages

- ❖ Setting the Current Culture
- ❖ Setting a Culture Manually
- ❖ Automatically Detecting a Culture
- ❖ Setting the Culture in the Web Configuration File
- ❖ Culture and ASPNET Controls
- ❖ Using the CultureInfo Class
- ❖ Using the CultureInfo Class to Format String Values
- ❖ Comparing and Sorting String Values
- ❖ Creating Local Resources
- ❖ Explicit Localization Expressions
- ❖ Implicit Localization Expressions
- ❖ Using Local Resources with Page Properties
- ❖ Retrieving Local Resources Programmatically
- ❖ Creating Global Resources
- ❖ Retrieving Global Resources Programmatically
- ❖ Using Strongly Typed Localization Expressions
- ❖ Using the Localize Control

Using ASPNET Membership

- ❖ Configuring Authentication
- ❖ Configuring Forms Authentication
- ❖ Using Cookieless Forms Authentication
- ❖ Using Sliding Expiration with Forms Authentication
- ❖ Using Forms Authentication Across Applications
- ❖ Using Forms Authentication Across Domains
- ❖ Using the FormsAuthentication Class
- ❖ Using the User Class
- ❖ Configuring Authorization
- ❖ Authorizing by Role
- ❖ Authorizing Files by Location
- ❖ Using Authorization with Images and Other File Types
- ❖ Using Authorization with ASP Classic Pages
- ❖ Using ASPNET Membership
- ❖ Using the Membership Application Programming Interface
- ❖ Encrypting and Hashing User Passwords
- ❖ Modifying User Password Requirements
- ❖ Locking Out Bad Users
- ❖ Configuring the SQLMembershipProvider
- ❖ Configuring the ActiveDirectoryMembershipProvider
- ❖ Creating a Custom Membership Provider
- ❖ Using the Role Manager
- ❖ Configuring the SqlRoleProvider
- ❖ Configuring the WindowsTokenRoleProvider
- ❖ Configuring the AuthorizationStoreRoleProvider
- ❖ Caching Roles in a Browser Cookie
- ❖ Using the Roles Application Programming Interface

Configuring Applications

- ❖ Overview of Website Configuration
- ❖ Using the Web Site Administration Tool
- ❖ Using the ASPNET Microsoft Management Console Snap-In
- ❖ ASPNET Configuration Sections
- ❖ Contents xix
- ❖ Applying Configuration Settings to a Particular Path
- ❖ Locking Configuration Settings
- ❖ Adding Custom Application Settings
- ❖ Placing Configuration Settings in an External File
- ❖ Using the Configuration API
- ❖ Reading Configuration Sections from the Current Apps
- ❖ Opening a Configuration File
- ❖ Opening a Configuration File on a Remote Server
- ❖ Using the Configuration Class
- ❖ Modifying Configuration Sections
- ❖ Provisioning a New Website
- ❖ Creating Custom Configuration Sections
- ❖ Creating a Configuration Element Collection
- ❖ Creating Encrypted Configuration Sections
- ❖ Encrypting Sections with the aspnet_regiis tool
- ❖ Encrypting Sections Programmatically
- ❖ Deploying Encrypted Web Configuration Files
